APPLICATION LETTER

Application for Python / AI Engineer Position

Dear Hiring Manager,

I am writing to express my interest in the Python / AI Engineer position. I am a Computer Science graduate with hands-on experience building backend systems, AI-powered applications, and full-stack products using Python, Django, FastAPI, LangChain, LangGraph, PostgreSQL, React, and AWS.

Recently, I have focused heavily on building AI agents and LLM-powered systems. In Zaplyn, I built an AI-native commerce platform with a LangGraph-based agent capable of understanding natural-language requests and executing workflows across products, shops, markets, orders, inventory, and analytics. I also implemented structured planning, Pydantic validation, tool routing, deterministic execution, and confirmation-based actions.

Alongside AI development, I have experience with REST APIs, authentication, payment integrations, background jobs, Docker, AWS ECS/EC2/S3, databases, and production deployments. I enjoy working across both backend and AI layers and turning ideas into complete, usable products.

I would be excited to bring this combination of AI engineering, backend development, and product-building experience to your team. I am a fast learner, comfortable working independently, and particularly interested in opportunities where I can contribute to building practical AI-powered products.

Thank you for considering my application. I would be happy to discuss how my experience could contribute to your team.

Best regards,

Nakul Sejwar
